and how the database was curated. Donations Please consider making a donation to help with our efforts. Donate The National Library of Medicine (NLM) The National Library of Medicine (NLM), one of the world's largest medical libraries, is located in Bethesda, Maryland. It supports a number of information programs and services to the health community, including the PubMed database. It is the principle depository for the U.S. National Institutes of Health (NIH) and serves as a center for biomedical information in the U.S. and abroad. SRI International, one of the world's most respected research organizations, is helping to build a large national library that will play a leading role in the development of biomedical and health information science and technology. SRI is developing the Library for the 21st Century (L21C), an online resource that will provide the world's most comprehensive collection of biomedical and health information. The collection of full-text articles, journals, and other materials will be expanded and improved with new online content that will be available to researchers, educators, physicians, and patients. About Us The goal of the SRI International Consortium is to produce a high-quality, collaborative medical librarian and information scientist program that will serve the medical and biological sciences community worldwide. SRI International is offering a complete library science program that includes courses on information management and on medical research to facilitate SRI's mission of providing the best available biomedical information resources to scientists in academia, industry, and government. With SRI's world-class technical expertise, the Consortium will produce innovative professional library services. Courses If you are interested in an SRI International consortium degree, please consider applying for any of the following courses. Courses are offered through the consortium and not directly by SRI International. Librarianship at the SRI International Consortium Catalog of Courses at the SRI International Consortium SRI International Consortium Catalog of Courses by Degree Program National Library of Medicine Course Catalog Admission Requirements The Consortium partners with several other schools in order to offer a comprehensive library science degree program. SRI International's undergraduate library science program is designed to prepare students to hold a variety of professional positions in the field, including the following: full-time employment in biomedical librarianship, permanent employment in a library system, 82157476af
